Build a $10,000 McLaren 720S Spider Fury Website in 30 Minutes

Complete Step-by-Step AI Workflow Guide

> **Build a professional luxury car website using 100% free AI tools — no coding required.** This exact workflow creates an award-winning, scroll-animated showcase website for the **McLaren 720S Spider Fury** that you can sell for $5,000–$10,000.

What You'll Build

- Apple-style scroll-based 3D car animation (240 frames)
- Engine exposure transition — hood opens as you scroll
- Professional HUD overlay with specs: 4.0L Twin-Turbo V8, 720PS, 2.9s 0–62 MPH
- Premium dark McLaren theme with orange accents (#FF8000)
- Fully deployable website with custom domain support

Tools Used (100% Free)

Tool	Purpose
Google Whisk	AI car render generation
Google Veo Flow V3.1	Professional video animation
Google Anti-Gravity	Complete website code generation
EZGif	Video to frames converter (30 FPS)
Netlify	Free website hosting & deployment

Complete Step-by-Step Guide

STEP 1 — Find Your Car Reference Image

1. Go to **Google Images** and search: `McLaren 720S Spider Fury`
2. Find a **front-facing or front three-quarter angle** shot — clean background preferred
3. Also find a **rear shot with engine exposed / dihedral doors open**
4. Right-click → **Save Image** for both shots

5. Create a folder on your desktop — name it: `mclaren-fury-website`

> ⚠ **Pro Tip:** The front angle and the engine-exposed rear angle must have a **similar background** (studio or track) so the animation transition looks seamless.

STEP 2 — Generate 3D Car Renders with Google Whisk

Go to: https://labs.google/whisk

Front Shot Prompt:

```
I want the angle of the McLaren 720S Spider Fury to match
that of a low aggressive front-center studio shot,
highlighting the dihedral doors and aerodynamic canards,
matte carbon fiber finish, dramatic dark studio lighting
```

Rear Shot / Engine Exposed Prompt:

```
McLaren 720S Spider Fury, rear engine compartment cover
lifted open, dihedral scissor doors open, exposed
twin-turbocharged 4.0L V8 engine visible, back angle,
dark studio background, photorealistic
```

Steps in Whisk:

1. Click **Upload Image** → upload your saved McLaren reference photo
2. Paste the Front Shot prompt → generate 5–10 variations
3. Save your best front angle result
4. Delete reference → upload the rear engine shot
5. Paste the Rear Shot prompt → generate variations
6. Save your best engine-exposed rear result

> ⚠ **Pro Tip:** Keep generating until the background angle between your front shot and rear shot **match each other** — critical for smooth video animation later.

STEP 3 — Animate the Car with Google Veo Flow V3.1

Go to: https://flow.google

1. Switch mode to **"Frames to Video"**
2. Click the **+ icon** → Upload
3. Upload your **front angle shot** as the **Start Frame**
4. Upload your **engine-exposed rear shot** as the **End Frame**
5. Paste this complete **Video Prompt:**

```
A photorealistic, continuous cinematic shot of a matte carbon fiber McLaren 720S
Spider Fury in a high-contrast dark studio. The camera begins at a low, aggressive
front-center angle, highlighting the striking Fury-spec wheels and the iconic
dihedral doors with razor-sharp aerodynamic elements. Without cutting, the camera
performs a slow, sensual, sweeping orbit around the vehicle's flank. It transitions
smoothly from the front three-quarter view, gliding past the sculpted side profile
to showcase the glossy carbon fiber weave, the dramatic side air intakes, and the
sleek retractable hardtop, eventually arriving at a dramatic low rear angle, framing
the active rear diffuser, quad exhaust tips, and the integrated rear spoiler. Once
established in this rear position, the rear mid-engine compartment cover lifts away
vertically out of frame, revealing the heart of the machine. Immediately following
this, the exposed twin-turbocharged 4.0L V8 engine undergoes a slow-motion
'technical exploded view' animation. The turbocharger assemblies, exhaust manifolds
intercoolers, and suspension uprights slowly float outwards from the central engine
block with rigid mechanical precision. There is zero morphing or warping; every par
remains solid and textured as they expand to reveal the internal British engineering
The lighting remains dramatic and moody, emphasizing the polished aluminum and
carbon-textured metallic glint of the floating engine components against the deep
black background.
```

Veo Flow Settings:

- Model: **Veo 3.1 Fast**
- Generations: **1 at a time** (gives better control)
- Run **3–4 generations** until you get a smooth result
- Download **Original Size** for best quality
- Save video into your `mclaren-fury-website` folder

STEP 4 — Convert Video to Scroll Frames (EZGif)

Go to: https://ezgif.com/video-to-jpg

1. Click **Choose File** → upload your downloaded McLaren video
2. Click **Upload Video**
3. Set FPS to **30**
4. Click **Convert to JPG**
5. Scroll to bottom → Click **Download ZIP**
6. Name the zip: `fury-frames`
7. **Double-click to unzip** the folder
8. Move the unzipped folder into `mclaren-fury-website`
9. Rename the frames folder to: `fury-sequence`
   (frames must be named `1.jpg` to `240.jpg`)

> **Pro Tip:** You'll get 240+ frames. These power the scroll animation — at 0% scroll the front of the car shows, at 100% scroll the engine is fully exposed.

STEP 5 — Build the Website with Google Anti-Gravity

Go to: Google Anti-Gravity in your browser

1. Click **Open Folder** → select your `mclaren-fury-website` folder
2. Click **Open**
3. Copy and paste this complete **One-Shot Website Prompt:**

```
You are a Senior Creative Frontend Engineer specializing in
Awwwards-winning "Scrollytelling" websites.

Build a complete, production-ready, single-page luxury car showcase for the
McLaren 720S Spider Fury. Core mechanic: scroll-controlled image sequence
(video-like) background + "HUD-style" text overlay transitioning strictly
based on scroll progress.

TECH STACK:
- Framework: Next.js 14+ (App Router, TypeScript)
- Styling: Tailwind CSS v4 (using @theme variables)
- Animation: Framer Motion (all entry/exit animations)
- Core Logic: HTML5 Canvas + framer-motion useScroll

ASSETS: 240 frames in public/images/fury-sequence/ named 1.jpg to 240.jpg

SETUP:
- Install: npm install framer-motion clsx tailwind-merge
- Fonts: Orbitron (headings), Rajdhani (body/UI) via next/font/google

COLORS (app/globals.css):
- mclaren-black: #0a0a0a
- mclaren-orange: #FF8000
- bright-orange: #FFA040
- carbon-gray: #1c1c1c
- Background: #0a0a0a, Text: white, Selection: mclaren-orange

ARCHITECTURE:
app/page.tsx owns useScroll on a 600vh container, passes scrollYProgress down.

FuryScrollCanvas: renders correct frame (1-240) based on scrollYProgress.
MUST use window.devicePixelRatio for 4K sharpness.

FuryExperience HUD — 3 phases:
Phase 1 (0%-33%) HERO:
  - Bottom-left: eyebrow "THE APEX PREDATOR" in orange, large "McLAREN" title
    (Orbitron, clamp 3rem-6.5rem), "720S SPIDER FURY" subtitle,
    "Where aerodynamics meet British precision." subtext, "CONFIGURE YOURS →" CTA
  - Top-right: £250,000 price (Orbitron 2.5rem), "CONTACT DEALER" outlined button
  - Top-center: "01 START  02 AERODYNAMICS  03 ENGINE" phase indicator
    (active phase in orange)

Phase 2 (33%-66%) AERODYNAMICS:
  - Fade out Hero, fade in "Aerodynamics" title + "Carbon Fibre Monocoque II-S"
  - "DISCOVER AERODYNAMICS →" CTA in orange
  - Phase indicator: 02 highlighted
```

```
Phase 3 (66%-100%) ENGINE:
  - Fade out Aerodynamics, fade in "Engine" title
  - Right-side spec panel (border-left: 1px solid #FF8000):
    Three large numbers: 720 PS / 770 NM / 2.9 SEC
    Spec list: 4.0L Twin-Turbo V8 / 7-Speed SSG / 1,332 KG / 540 PS/TONNE
  - Phase indicator: 03 highlighted

HUD LAYOUT RULES:
- Eyebrow: 0.7rem, letter-spacing 0.3em, color #FF8000, uppercase
- Hero title: Orbitron, bottom-left, position absolute bottom:80px left:48px
- Price: top-right, position absolute top:80px right:48px
- Phase nav: top-center, position absolute, transform translateX(-50%)
- Engine spec panel: position absolute right:48px top:50% translateY(-50%)
- All overlays: pointer-events-none, z-index:10

BELOW-SCROLL SECTIONS:

SpecsGrid "BY THE NUMBERS":
4-column data table layout. Each column: orange header + orange bottom border
+ label/value rows (label left muted, value right white, Rajdhani 0.75rem)
PERFORMANCE: 0-62 MPH 2.9s | 0-124 MPH 7.8s | 0-200 KM/H 7.8s | Top Speed 212 MPH
POWERTRAIN: Engine 4.0L Twin-Turbo V8 | Power 720 PS (710 BHP) | Torque 770 Nm | Tran
CHASSIS: Construction Carbon Fibre Monocoque II-S | Dry Weight 1,332 kg | Weight Dis
DIMENSIONS: Length 4,543 mm | Width 2,059 mm | Height 1,196 mm | Wheelbase 2,670 mm

Features "BEYOND PERFORMANCE":
2x2 card grid, each card: icon left (40px, orange) + title uppercase + description
1. MONOCAGE II-S — Carbon fibre monocoque integrates retractable hardtop without co
2. PROACTIVE CHASSIS CONTROL II — Linked hydraulic dampers adapt in real-time to roa
3. ELECTROHYDRAULIC STEERING — Razor-sharp response with nuanced road feel at any spe
4. RETRACTABLE HARDTOP — Folds in 11 seconds at speeds up to 31 MPH.

Quote Section "A RELENTLESS PURSUIT OF SPEED":
Centered orange headline + white body text + "— McLaren Automotive" attribution
+ glowing pill CTA "CONFIGURE YOURS" (#FF8000 bg, black text, hover glow)

Footer: 4 columns
Col 1: McLaren logo + "McLaren Automotive — pioneers of innovation since 1963."
Col 2: EXPLORE — Configurator, Ownership, Motorsport, Heritage
Col 3: SUPPORT — Contact, Dealers, Service, Press
Col 4: STAY CONNECTED — email input + submit arrow, border-color #FF8000 on focus
Bottom bar: "© 2026 McLaren Automotive Ltd. All rights reserved." + Privacy Terms C

TONE: Premium, Technical, British Racing Precision
CONSTRAINT: User cannot scroll past car sequence until it finishes (600vh sticky)
```

4. Press **Enter / Send**

5. Wait 3–5 minutes for the full website to generate

STEP 6 — Deploy to Netlify (Free Hosting)

In the Anti-Gravity terminal:

```
npm run build
```

This creates a production-ready `out` folder. Then:

1. Go to netlify.com
2. Click **Add New Project** → **Deploy Manually**
3. Click **Browse to Upload**
4. Locate and select the `out` **folder** inside your project
5. Click **Upload** → Netlify gives you an **instant live URL**

To connect a custom domain:

- Netlify → **Domain Settings** → **Add Custom Domain**
- Enter your purchased domain → follow DNS setup steps

To preview locally:

```
npm start
```

Opens at `localhost:3000`

All Prompts — Quick Reference

Image Prompt 1 — Front Shot

```
I want the angle of the McLaren 720S Spider Fury to match that of
a low aggressive front-center studio shot, highlighting the dihedral
doors and aerodynamic canards, matte carbon fiber finish,
dramatic dark studio lighting
```

Image Prompt 2 — Rear Engine Exposed

```
McLaren 720S Spider Fury, rear engine compartment cover lifted open,
dihedral scissor doors open, exposed twin-turbocharged 4.0L V8 engine
visible, back angle, dark studio background, photorealistic
```

Generation Tips

- **Whisk:** Generate 5–10 variations until front + rear shots match in background/lighting
- **Veo Flow:** V3.1 Fast, 1 generation at a time — 3–4 tries for perfect output
- **EZGif:** Always set exactly **30 FPS** for smooth scrolling
- **Frames:** Must be named `1.jpg` to `240.jpg` inside `fury-sequence` folder

⚙ Terminal Commands

```
# Install dependencies
npm install framer-motion clsx tailwind-merge

# Create production build
npm run build

# Preview on localhost
npm start
```

💰 How to Sell This

Client Type	Price Range
Car dealerships	$5,000 – $8,000
Luxury auto brands	$8,000 – $15,000
Individual car collectors	$2,000 – $5,000
Auto events / launches	$3,000 – $7,000

Why it commands this price:
Normally this requires a Blender 3D artist ($200/hr), a web developer ($150/hr), and an animation specialist ($250/hr) working 2–4 weeks. With this workflow, you build it in **30 minutes**.

Other car variants you can build with same workflow:
Ferrari SF90 · Lamborghini Revuelto · Bugatti Chiron · Porsche 918 · Koenigsegg Jesko

🎯 Key Features of the Website

- Scroll-based animation (car hood opens as you scroll)
- 30 FPS buttery smooth transitions
- Professional 4-column specs display
- Dark premium luxury theme
- HUD-style overlay with phase transitions
- Responsive design for all devices

- Instant Netlify deployment

Comment "OUTREACH" for a dedicated tutorial on how to find clients and close sales!
